PROFESSIONAL SUMMARY

GTM engineer and B2B outbound operator who owns the full revenue pipeline: ICP definition, sourcing, enrichment, verification, cold email and CRM handoff. Ran the entire outbound function solo for a UK property compliance company, then built the Python tooling to remove the bottlenecks I had lived with. 50,000+ B2B contacts sourced and processed. Diagnosed a failing 15,000-email campaign and lifted reply rates from under 1% to around 7% by fixing the list rather than the copy. Comfortable owning outbound end to end for a small SaaS team, and equally comfortable writing the automation underneath it.

SELECTED RESULTS

Full teardowns at faaqjaved.github.io/Portfolio

- **<1% to ~7% reply rate** — diagnosed a five-month, 15,000-email campaign that was failing. Root cause was the list, not the copy: generic inboxes and missing SPF/DKIM/DMARC. Rebuilt targeting and authentication.
- **1,000 prospects cut to 70; 70% replied, 25% of those became customers** — three-pass qualification for a SaaS client. Discarding 93% of the list produced the highest-converting campaign I have run.
- **576 verified leads delivered in 49 minutes, unattended** — replaced a manual 4–6 hour per-client delivery process with a single command across two sources, deduplicated and pushed to Google Sheets.
- **22,700-record list cleaned to 9,567 usable contacts** — deduplicated, geo-filtered and qualified against the client's ICP.
- **10,000+ contact database built and maintained solo** — letting agents, block managers and estate agents across London, with a consistent field schema and a full audit trail.

EXPERIENCE

GTM Engineer / B2B Outbound Operations Consultant

Oct 2025 – Present

Self-employed — Remote (UK, US and EU clients)

- Own complete outbound loops for B2B clients: ICP definition, sourcing, enrichment, verification, cold email execution and CRM handoff.
- Built and ran campaigns across SaaS, e-commerce, professional services, corporate training and industrial export sectors — each with a distinct ICP and qualification standard.
- Designed a three-bucket verification standard (verified / catch-all / invalid) that routes catch-all contacts through a separate sending domain, protecting the primary domain's reputation.
- Deliver CRM-ready output on a 16-field schema — one row per contact, not per email — mapped into HubSpot and Zoho so sales can work it without cleanup.
- Built six production Python tools plus a private orchestration pipeline to automate sourcing, enrichment and delivery, cutting a 4–6 hour manual process to under an hour.

B2B Lead Generation Specialist & CRM Manager

Oct 2025 – Mar 2026

UK Property Compliance Company — Remote

- Sole operator of the entire outbound function: sourcing, qualification, list building, cold email, response tracking, meeting booking, invoicing and sales tracking.
- Built a 10,000+ contact database of letting agents, block managers and estate agents across London, pre-qualified on firm size, service type and compliance need before CRM handoff.
- Maintained a fully audit-tracked pipeline in structured sheets, giving the team live visibility without status meetings.
- Identified that most collected addresses were generic company inboxes rather than decision-makers — the finding that reshaped how I qualify every list since.

Self-employed — Remote

- Built a six-tool lead generation suite covering Google Maps, Trustpilot, JSON API directories, HTML directories and WordPress AJAX endpoints, with a unified output schema.
- Wrote a two-pass contact enricher (concurrent HTTP, Playwright fallback for JS-rendered pages) with SMTP-level verification and E.164 phone normalisation.
- Architected a private orchestration layer — plugin system, SQLite run history, FastAPI control surface — so adding a new data source is one file, not a rewrite.
- Maintained the suite to production standard — full automated test coverage and continuous integration across Linux, Windows and macOS.

TECHNICAL SKILLS

GTM & Outbound: ICP definition and segmentation · trigger/signal-based targeting · enrichment waterfalls · email verification and deliverability (SPF, DKIM, DMARC, domain warmup) · cold email sequencing and A/B testing · reply-rate diagnosis · lead scoring and routing

Tools & Platforms: Apollo.io · LinkedIn Sales Navigator · Clay · Instantly · HubSpot · Zoho CRM · Airtable · Google Sheets · Excel (advanced) · n8n (in progress)

Automation & Data: Python 3.9–3.12 · Playwright · Selenium · httpx · BeautifulSoup4 · pandas/openpyxl · FastAPI · SQLite · REST APIs · pytest · GitHub Actions CI · Git

Data Operations: Two-pass deduplication · geographic filtering · firmographic segmentation · E.164 normalisation · schema design for CRM import · data validation and audit trails

Languages: English (professional working proficiency, EF SET C2 — 78/100) · Urdu (native)

OPEN-SOURCE TOOLING — [GITHUB.COM/FAAQJAVED](https://github.com/FAAQJAVED)

Six public MIT-licensed repositories, each with automated tests and CI on Ubuntu, Windows and macOS.

- [Google Maps Business Scraper](#) — Playwright scraper with concurrent email enrichment, Cloudflare decoding and crash-safe checkpoint/resume.
- [HTML Directory Scrapers](#) — dual-engine: CSS-selector scraper for any paginated HTML directory, plus a WordPress AJAX engine with automatic nonce lifecycle handling.
- [Trustpilot Business Scraper](#) — reputation-filtered business listings with ratings and review counts.
- [JSON Directory Harvester](#) — config-only retargeting for any JSON API directory; no code changes to point at a new source.
- [Email & Phone Enrichment Tool](#) — two-pass crawler, standalone or as the enrichment layer for any discovery tool.
- [LeadHunter Pro](#) — four search engines in parallel with configurable HOT/WARM/COLD lead scoring.

EDUCATION & CERTIFICATION

BSc Physics — University of Sargodha, Pakistan | 2020 – 2025 | CGPA 3.24

Quantitative and analytical foundation: computational physics (C++, MATLAB), mathematical physics, statistical analysis.

Programming for Everybody — University of Michigan (Coursera), 2025
